Fixed Points

Exercise 1 (3 points)

We represent non-negative integers with the following Lambda expressions:

$$0 \equiv \lambda f \cdot \lambda x \cdot x$$
$$1 \equiv \lambda f \cdot \lambda x \cdot f x$$
$$2 \equiv \lambda f \cdot \lambda x \cdot f(fx)$$
$$\vdots$$
$$n \equiv \lambda f \cdot \lambda x \cdot f^{n} x$$

Suppose you have defined the function **if** and the operations **add**, **pred** and **isZero**. Consider the following recursive (and hence not valid) definition for the multiplication:

times =
$$\lambda n_1 \cdot \lambda n_2$$
 . if (isZero n_1) 0 (add n_2 (times (pred n_1) n_2))

If we abstract the name **times**, we get the new expression:

$$\mathbf{t} = \lambda f \cdot \lambda n_1 \cdot \lambda n_2 \cdot \mathbf{if} (\mathbf{isZero} \ n_1) \ \mathbf{0} (\mathbf{add} \ n_2 \ (f \ (\mathbf{pred} \ n_1) \ n_2))$$

By the FP theorem we know that (Y t) is a non-recursive equivalent of the above times definition.

The exercise: write down the reduction sequence to demonstrate that

$$(((Y t) 1) k) \rightarrow k.$$

Exercise 2 (3 points)

We can represent lists and list operators with the following Lambda expressions:

$$\begin{aligned} & \textbf{nil} = \lambda f \cdot true \\ & \textbf{null} = \lambda l \cdot l \left(\lambda h \cdot \lambda t \cdot false \right) \\ & \textbf{cons} = \lambda h \cdot \lambda t \cdot \lambda f \cdot fht \\ & \textbf{head} = \lambda l \cdot l \left(\lambda h \cdot \lambda t \cdot h \right) \\ & \textbf{tail} = \lambda l \cdot l \left(\lambda h \cdot \lambda t \cdot t \right) \end{aligned}$$

Example: the list [1, 2, 3] is represented by the λ -expression cons 1 (cons 2 (cons 3 nil)).

To do:

1. Translate the following definition into a non-recursive form:

$$\mathbf{append} = \lambda \ l_1 \ . \ \lambda \ l_2 \ . \ \mathbf{if} \ (\mathbf{null} \ l_1) \ l_2 \ (\mathbf{cons} \ (\mathbf{head} \ l_1) \ (\mathbf{append} \ (\mathbf{tail} \ l_1) \ l_2))$$

2. Test your result by appending list L_2 to list L_1 , which are defined below:

$$L_1 = \cos 1 (\cos 2 \operatorname{nil})$$
 and $L_2 = \cos 3 \operatorname{nil}$
